

Using Standard Text in Adobe Form

[January 2, 2016](#) [coderobbot](#) [Uncategorized](#) [3 comments](#)

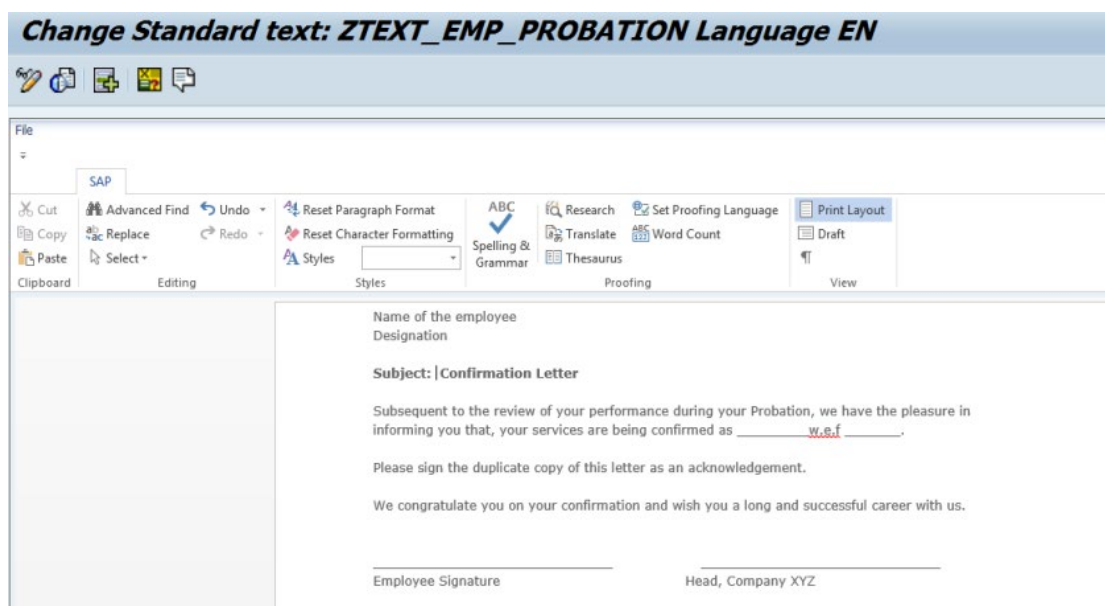

To create standard text, go to Tx- SO10

provide text name and select Create.

Provide the text and save. Now we created the standard text.

Go to Tx- SFP and create an interface.

Alternative

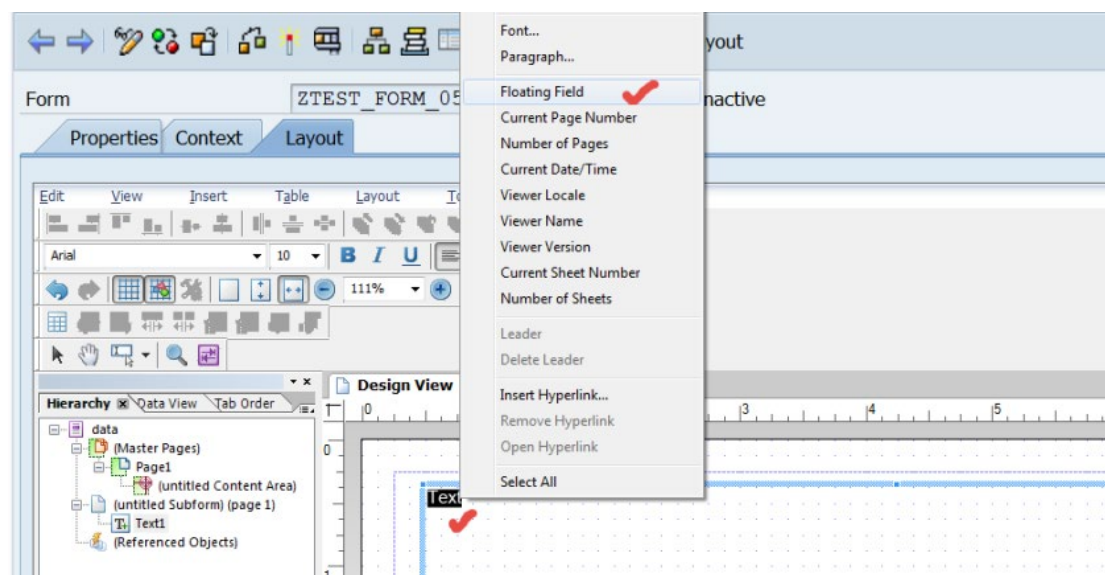

Provide a name, text type should be – Include Text, assign the text name (get the text name form the F4 help). Go to layout tab.

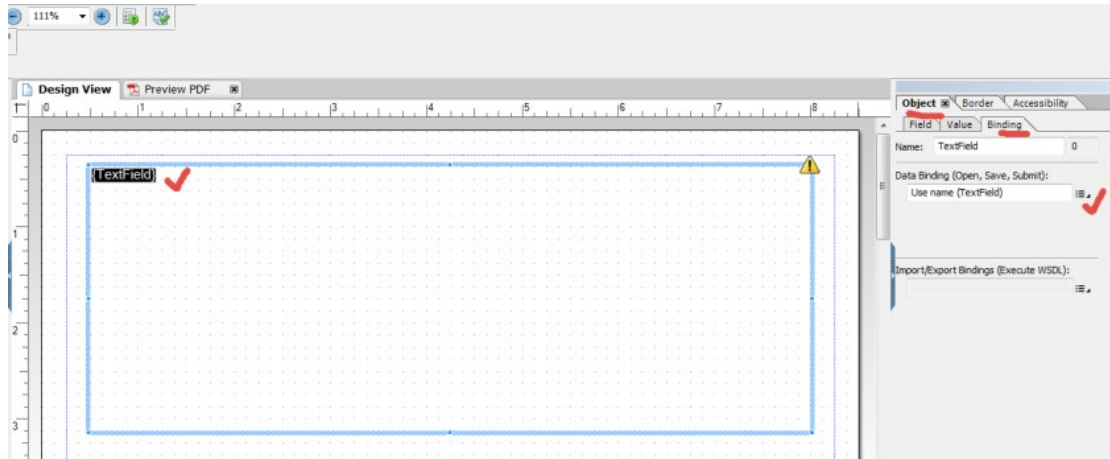

Create a text box , drag & drop on the design view.

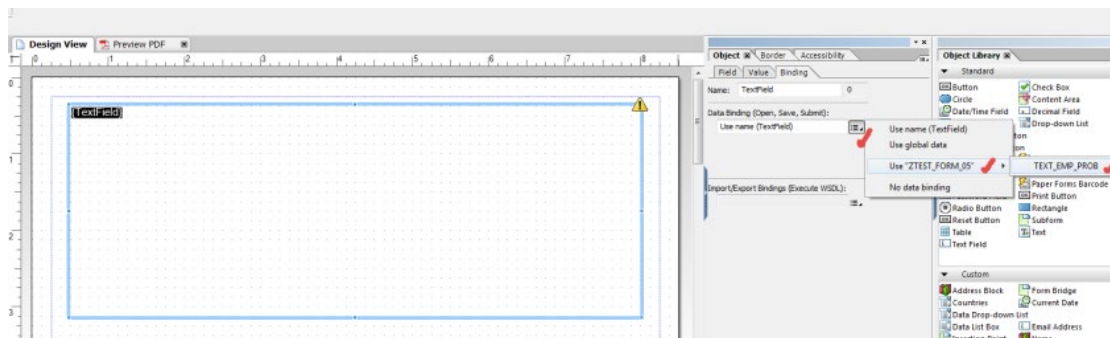

Extend [height and width] the text box as per needed. Select the text and right click. Select the floating field option.

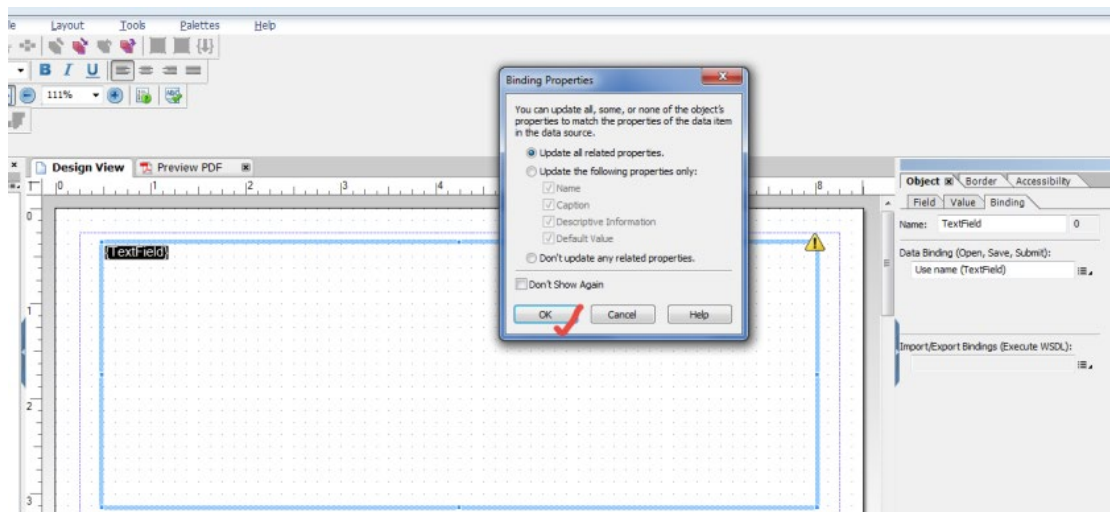

Now we have to bind the text field to the created include text field. So from data binding option, choose below name.

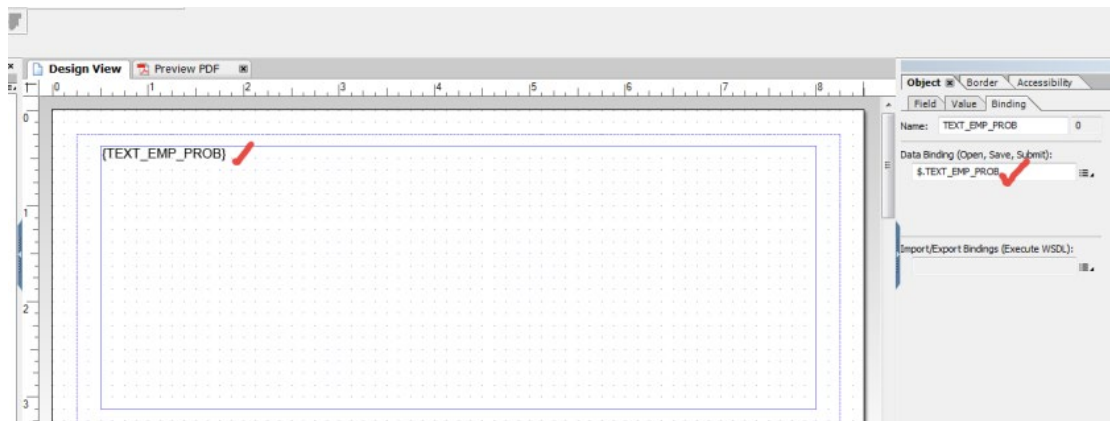

Select the name.

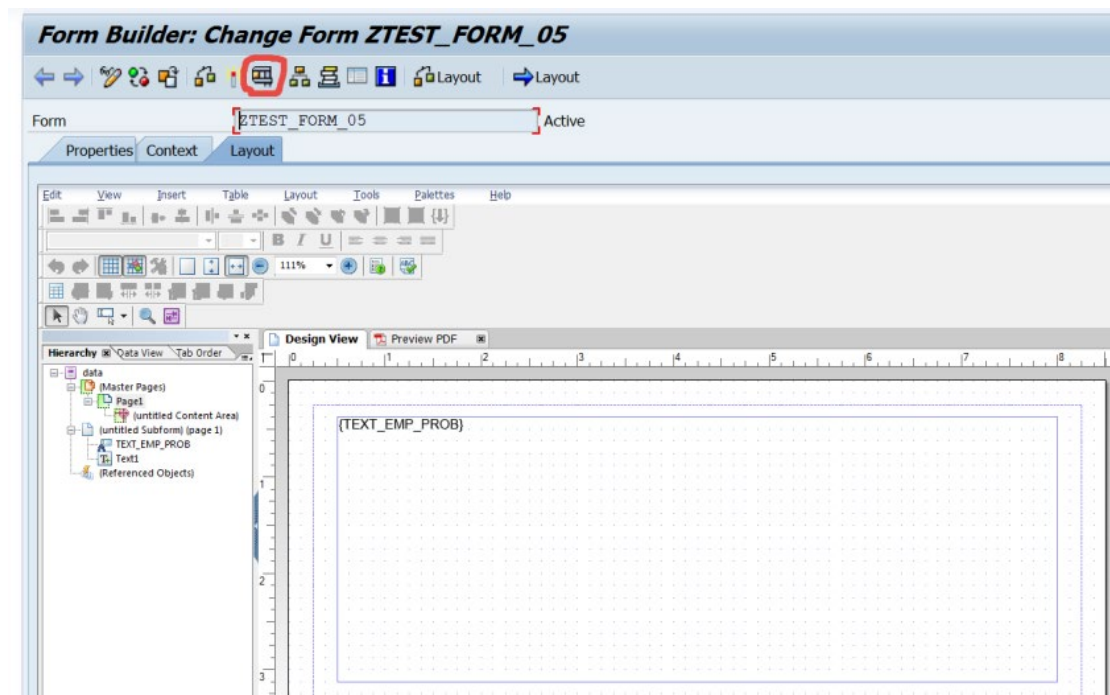

Select ok.

Mapping done.

Activate the form and Test.
